

Teachers use ICT enabled tools for effective teaching-learning process

Online platforms and learning management systems streamline communication and resource sharing, providing a centralized hub for assignments, feedback, and collaborative projects. This digital connectivity enhances the accessibility of educational materials, promoting a flexible and student-centric approach to learning.

Furthermore, teachers use ICT tools to customize instruction, catering to individual learning needs. Adaptive learning platforms and online assessments allow for real-time feedback, enabling educators to tailor their teaching methods and address students' specific challenges.

By embracing ICT-enabled tools, the institution empowers teachers to create a technologically enriched learning environment that prepares students for the digital age. This approach not only enhances the effectiveness of teaching but also equips students with essential digital literacy skills, ensuring they are well-prepared for the complexities of the modern workforce.
